Organization

Canaveral National Seashore

The 57,000 acres of CNS are part of the National Park system, which consists of 385 areas in 49 states and 4 U.S. territories totaling more than 84,000,000 acres.

The Seashore's 24 miles of beaches, dunes, hammocks, and submerged lagoons contain the northernmost locations for several tropical and sub-tropical environmental systems. Vegetation and animal life are diverse and some of the Seashore's resident and migrant animals are included on Federal lists of threatened and endangered species.

Over 100 Historic and prehistoric/aboriginal resources are included within the boundary of Canaveral National Seashore

Primary Purpose of the Seashore

The lands set aside by Congress (Public Law 93-626) "...to preserve and protect the outstanding natural, scenic, scientific, ecological, and historic values of certain lands, shoreline, and waters of the State of Florida, and to provide for public outdoor recreation use and enjoyment of same..." The 1974 House of Representatives Report (#93-1497) states "A National Seashore in the Canaveral area will **not** be intended to provide high density recreation uses. Instead,.... To afford opportunity for leisure activities in an undeveloped, uncrowded setting."

General Management Plan

- ✘ Is a set of goals for the next 20 years
- ✘ Involves public, partners, and other governmental agencies
- ✘ Is a multi-year effort with implementation expected to begin in 2004/2005
- ✘ Describes "desired future conditions" for the Seashore
- ✘ Provides consistency and continuity
- ✘ Provides long-range guidance and management direction for the Park

The General Management Plan Process:

- ✘ Identifies the major "issues" (input from this meeting and others)
- ✘ Develop alternatives to address the issues (for public review in 2003)
- ✘ Select final/best alternative
- ✘ Publish draft plan for public input
- ✘ Publish final Plan (in 2004)
